

## Evidence Cards

### EVIDENCE #1

Atlantic Salmon are found in the northern part of North America.

### EVIDENCE #5

Dams block the flow of rivers.

### EVIDENCE #2

Salmon swim up river (against the flow) to mate and spawn (lay eggs).

### EVIDENCE #6

More dams are being built every year.

### EVIDENCE #3

Salmon swim downstream, out to the ocean, to eat and grow.

### EVIDENCE #7

The amount of salmon in North America has decreased in the past 30 years.

### EVIDENCE #4

Pollution & acid rain have affected the quality of the water in North American rivers.

### EVIDENCE #8

Fisherman catch salmon at increasing rates each year.
